

## INDUSTRIES SERVED

### *Municipal* ∴

Flat Bottom Water tanks in municipal water storage have been a mainstay for Fisher Tank and are a vital link in your infrastructure. We take our role seriously whether you are a larger water system / company or smaller, single town municipal system. We can offer our years of expertise to help value engineer a **Standpipe** or **Reservoir** to operate the way you want it to, using internal piping, baffles or other means of circulating water while meeting your critical schedule. We also build leg type **Elevated tanks** in the Southeast to meet the needs of smaller communities.
