

## SERVICES

### *Fabrication* :::

The relationships we have developed with our suppliers since 1948 allow us to procure our material from various sources with the highest quality and best delivery to ensure schedule commitments. The quantity of plate material that we purchase allows us to go direct to the mills that produce the material, eliminating the middle person and saving you money. We also carry stock material allowing us to respond quickly to our customer needs when necessary.

Fabrication is performed in two fabrication facilities strategically located in **Chester, PA** and **Lexington, SC**. With a combined fabrication area of over 90,000 square feet, we have extensive fabrication capabilities at these facilities, with modern and efficient equipment, including plate rolls, angle rolls, CNC plasma cutting tables, gantry cutting system, various overhead cranes, automated welding, and much more. From our facilities, we ship material down the street or around the world.
