Standpipes ::

A standpipe has a height greater than its diameter, and capacities from 30,000 gallons to 10,000,000 gallons. Standpipes are used in relatively flat areas that require greater water pressure for distribution. Standpipes are also an economical alternative to **elevated tanks** in certain situations. Steel standpipes are designed and built to **AWWA D-100** standard and can be a beautiful landmark to make a community proud.
